

ARE YOU READY ?

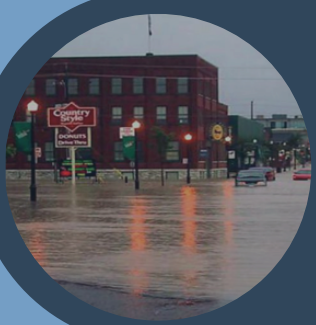

CLIMATE CHANGE & ASSET MANAGEMENT

The state of readiness for rural Ontario municipalities to integrate climate change considerations within asset management practices is being explored.

Stakeholders across rural Ontario municipalities, were polled and preliminary findings include:

95% of rural municipalities have implemented an asset management plan

23% of rural municipalities have considered climate change impacts on infrastructure

87% of rural community members are concerned about climate change effects on their community

Although concerned about climate change, most rural community members feel uninformed and uncertain on its significance for their community.

How can your community better prepare for climate change and strengthen asset management planning?
